

AI VIDEO AUTOMATION ENGINEER

Sayudh Khataavkar

☎ +91-7021466229 ✉ Email 🌐 GitHub 🌐 LinkedIn 🌐 Portfolio

Summary

Creative technologist and final-year B.Tech Computer Science student with hands-on experience building AI image and video generation pipelines using Stable Diffusion, Runway ML, Kling, HeyGen, and Pika Labs. Skilled at combining Python automation with generative AI tools to produce scalable content — from faceless educational videos and AI avatar spokespeople to social media reels and text-to-video pipelines. Experienced in end-to-end creative production, prompt engineering, and workflow automation using tools like n8n and Hugging Face Diffusers. Seeking to bring a strong technical foundation and genuine passion for generative AI to an AI video creation role

Education

B.Tech in Electronics and Computer Engineering

2022 – 2026

KJ Somaiya School of Engineering, Mumbai, Maharashtra

CGPA: 9.34 / 10

Higher Secondary (12th Grade) — Maharashtra State Board

2022

Khalsa College of Arts, Commerce and Science, Mumbai, Maharashtra

Percentage: 71.70%

Secondary (10th Grade) — Maharashtra State Board

2020

Dr. Antonio Da Silva High School, Mumbai, Maharashtra

Percentage: 87.80%

Skills

Image Geberation: Stable Difussion, Gemini(Nano Banana),Midjourney, DALL E

Video Generation: Higgsfield, Seedance, Runway ML, Kling, HeyGe,ChatGPt(Sora),

Video Editing & Colour Grading: Microsoft Clipchamp, CapCut, Canva,

Programming & Automation: Python,n8n

Projects

AI-Powered Instagram Reels Generator

Tools: Runway ML, ElevenLabs, Python — Github

- Built an automated pipeline that converts a single text topic into a complete Instagram Reel, generating cinematic video clips via Runway ML, AI voiceover via ElevenLabs, and assembling the final output using Python's MoviePy library.
- Engineered dynamic prompt templates that adapt visual style, pacing, and tone based on content category (motivational, educational, product) to match platform-specific audience expectations.
- Designed the pipeline to output vertical 9:16 aspect ratio videos optimized for Instagram Reels and YouTube Shorts formats, ready for direct publishing.

Automated YouTube Shorts News Bot

Tools: Pika Labs, ElevenLabs, Python — Github

- Built an end-to-end automated news-to-video pipeline using Python and the NewsAPI to fetch trending headlines, generate relevant visual scenes via Pika Labs, and produce AI narrated voiceovers through ElevenLabs.
- Implemented a keyword-based content filtering layer in Python to automatically remove irrelevant or sensitive topics before video generation, ensuring brand-safe output.
- Produced publish-ready YouTube Shorts in under 3 minutes per video by fully automating the script, visual, audio, and assembly stages using Python's MoviePy library with zero manual editing required.

Text to Video Generation Pipeline

Tools: Hugging Face Diffusers, ModelScope, Python, Google Colab — Github

- Reduced data inconsistency by 35% through systematic data cleaning, preprocessing, and exploratory data analysis (EDA) on noisy hospital records, using descriptive statistics to detect outliers and validate data quality across 3 pipeline validation stages — ensuring high-quality inputs for downstream analytical workflows and client-facing dashboards.
- Built a star-schema warehouse and Power BI dashboards to visualise patient admissions and bed occupancy, enabling hospital administrators to make data-driven decisions on resource allocation — translating complex data into client-ready insights.
- Documented full data transformation and model validation workflows in Databricks, producing structured reports that align with analytical workflow documentation best practices.

EXPERIENCE

Automation Intern

5th January 2026 – 19th May 2026

LogisticsNow (On-site)

Tools: Python, n8n, Power BI

- Automated content summary emails using n8n by connecting data outputs to scheduled email workflows, reducing manual reporting effort and ensuring consistent communication with stakeholders.
- Redesigned data extraction and cleaning workflows across 100K+ logistics records, cutting KPI reporting cycle time by 30% and enabling faster visual reporting for client teams..
- Built visual analysis identifying 2 high-cost transporter segments from freight and shipment data, presenting findings through clear charts to support procurement decision-making.

Research and Strategy Intern

18th June 2025 – 31st July 2025

Skylark Lifestyles Pvt. Ltd. – Aeronext Solutions (Remote)

Tools: Python, Power BI

- Created visual dashboards and charts showing passenger flow and occupancy patterns to support a cost-saving analysis, presenting findings to the client team through clear visual storytelling.
- Designed comparison visuals showing model predictions against real data, making complex results easy to understand for non-technical stakeholders.
- Developed a structured pilot proposal deck with supporting visuals, outlining the end-to-end implementation plan and projected outcomes to pitch the solution to the client engagement team for approval.
